

Dear Chiropractic Patient,

As we continue to monitor the constant evolving CoVid-19 situation and social distancing that is currently affecting our community, I wanted to share some helpful information. Chiropractic care has been proven to boost your immune system. It is morally and ethically the right choice for us to continue business as usual. What we DO know is that the work that Chiropractors do will help keep people healthier if they choose to utilize regular Chiropractic care. If you are a current patient and do not feel comfortable keeping your appointment at this time, please call us to reschedule.

As we respond to the ever-changing environment, the safety of our patients, staff and Doctor remains our highest priority. We remain committed to providing you with a safe environment in which to receive your Chiropractic care. We are taking protective measures to make your visits as clean, healthy and germ free as possible.

Dr. Keri and Laura are using extreme caution with their patient care by implementing vigilant hygiene routines for the patients, staff and the equipment. All providers are wearing a mask when seeing patients in the office. The adjusting and massage tables are being disinfected in between each patient. In addition all staff and providers are practicing frequent hand washing procedures and using hand sanitizer throughout the day. We are asking for everyone to either email, text or call us to schedule an appointment (no walk ins) in order to help us control the flow of traffic. All hard surfaces are being cleaned throughout the day to minimize any potential transmission of viruses. At this time, we can no longer use our IPAD self-check in device, so please check in upon arrival at the front desk. All patient's and visitors in our office will be **required** to wear a mask per the governor's recommendation on 4/15/2020.

We will continue to monitor our daily operation procedures and are following clinic protocol outlined by the World Healthcare Organization and leading authorities within the Chiropractic profession.

***In following with CDC guidelines: we ask that if you aren't feeling well (or are bringing a child with you that isn't well), have a fever or cough or respiratory illness at this time, please call the office to reschedule your visit to a future date once you are healthy again. We ask for you to respect and follow this guideline so that we may continue to provide chiropractic care to as many as people as possible during the time.*

I would like to reiterate again, that maintaining proper spinal alignment to strengthen your nervous system in turn provides a higher function of your immune system and assists your body in fighting off diseases. Therefore we encourage everyone to continue with their care plan so you have a better chance of fending off any disease , let alone this COVID pandemic virus. We are happy to be here providing **Essential** care to keep our community healthy! Thank you for your continued patience and patronage during this time.
